```
5  /**
   * Event handler implemented by a trusted application and registered with
   * EventHandlerRegistrar.
   */
public interface IEventHandler
10 {
   /**
    * The system will call this method when an error/info/reboot event is incurred and a
    * trusted application has registered to receive them.
    *
    * @param see - event encountered by the middleware.
15  *
    * @return If the registered application will completely handle this event, null is returned,
    * otherwise the event can be modified or returned unchanged and the system will
    * handle it.
    */
20  public IMessageEvent receiveEvent(IMessageEvent see);

   /**
    * Get any events saved by the handler.
    *
25  * @return The array of events or null if none were stored.
    */
   public IMessageEvent [ ] getEvents();
}
